

# Chicago Bulls Run by Michael Jordan

*I've missed more than 9000 shots in my career. I've lost almost 300 games. 26 times, I've been trusted to take the game winning shot and missed. I've failed over and over and over again in my life. And that is why I succeed.*

MJ

# Field Goal showdown: Wins & Losses

💡 Michael Jordan's **FG% in wins remained relatively stable** throughout his Chicago years, peaking at 56.61% in 1990. Meanwhile, his FG% in losses fluctuated, hitting its lowest point in 1995 (34.10%), a season where he played limited games.

When it comes to shot attempts, the total **FGA in losses was not significantly higher** in early career but showed variation over time. The **1987 season** stands out, as he **attempted nearly the same number of shots** in both wins and losses, with only small 1.25% (absolute) difference in FGA that year. However, in his peak scoring years, the gap widened significantly. For example, in 1996, Jordan attempted over 1,703 shots in wins nearly 72.28% more than in losses. This further highlights his dominance in games the Bulls secured victories.

💡 When the average points increase, fewer assists lead to a 0.82-point rise, while more steals and rebounds also contribute to higher scoring. Jordan's most **common scoring range is between 26 and 40 points, with 32 points appearing most frequently**. Jordan's top opponent was Detroit, facing them in 58 games. His field goal percentage was 47.34%, lower than his average of 50.55%
